

New opportunities with AFS

To make the production of standard sized name patches more comfortable and efficient MADEIRA advanced the development of the Automatic Frame System (**AFS**). Now the endless paper frames (E-ZEE PreFrames) are also available with blanks fixed on the foil. These blanks have only to be completed with a satin stitch border and the respective names. Then the embroidered name patches will be pulled out of the foil and fixed with a heat press on the garment, as this new version of the E-ZEE PreFrames has a heat-seal foil.

For the easy production of name patches MADEIRA offers the twill fabric fixed on the foil at first in the standard size of 11,5 cm x 6,5 cm with rounded edges. More colours and standard shapes will follow.

Not all punching software includes a monogramming software specially developed for name embroidery as a standard. Therefore, if need be, you can get with **AFS** a free of charge monogramming software. With this software name lists received by email will be transformed into stitch data, which can be processed in the embroidery machine. Thanks to **AFS** the different names will be automatically embroidered at the correct position of each blank. The software disposes of four different fonts (see example below), whose size can be easily changed. With **AFS** you can react faster and with more flexibility to the requirements of your costumers.
